- TC20: Verify that a user can change app icon
- TC21: Verify that a user can change UI of bottom app bar
- TC22: Verify that a user can modify navigation menu
- TC23: Verify that a user can modify quick add features

Defects of Todoist App

This app has a feature of changing app view layout. I found multiple defects here.

1. Initially, the user will see latest app layout here. But after changing the layout to the old one, he can not get back to the latest layout.
2. User's selected layout is not stable. Sometimes it shows the latest one though the user previously selected the old one.
3. Sometimes it shows the old app layout though the user did not change the layout from latest to old.
